

Privacy Policy and Data Management - SheetMuse: score PDF viewer

1. Introduction This Privacy Policy describes how users' personal data is collected, used, and managed within the "SheetMuse: score PDF viewer" mobile application, developed and provided by PromusicSoftware. By using the app, you accept the practices described in this document.

2. Data collected and purposes of processing: The SheetMuse app is designed to respect user privacy and collects only the data strictly necessary for the app's operation, data synchronization, and delivery of relevant advertising: Email Address and Authentication: We collect your email address and username through the Google Firebase service. This data is required to create an account, enable secure access, recover your password, and associate files with your personal profile. Your email address is not shared with third parties for external marketing purposes. Advertising Data (Google AdMob): The free version of the app displays ads through the Google AdMob network. To provide relevant ads, AdMob automatically collects your device's Advertising Identifier (**IDFA for iOS and AAID for Android**), information about your interactions with the app, and your approximate location derived from your IP address. Diagnostic and App Performance Data: To ensure application stability, we may automatically collect analytics data and crash logs through Google services. This data includes technical information about your device and the state of the app at the time of the error. Files, Documents, and Cloud Backup: The app allows you to view PDF scores and add annotations. To ensure you don't lose your work, the app automatically syncs: PDF files, setlists, and annotations are securely stored on Google Firebase's secure cloud servers, which are uniquely associated with your account. No personal files are made public or used for any purpose other than providing you with a personal backup service.

3. In-App Purchases and Financial Data: Purchases of the "NO-ADS" version of SheetMuse are handled entirely and securely by the **official store billing system (Apple App Store Billing or Google Play Billing)** depending on your device. PromusicSoftware does not collect, process, or have any access to your credit card numbers or financial information.

4. Account Deletion and Data Deletion: SheetMuse users have full control over their personal data and can completely and irreversibly delete it at any time. Deletion from the App: To delete your account and all associated data, go to the "Settings" menu (or tap the Profile icon) and select the "Delete Account" option. This action is immediate and automatic: it will revoke access and permanently delete your profile, all PDF files uploaded to the cloud, setlists, and annotations from our Firebase servers and your device's local storage.

5. Support and Reports: For any questions regarding this Privacy Policy, to receive technical support for the app, or to submit reports, you can contact the developer at
