

INTRODUCTION

Thank you for choosing WINLIVE GOLD by Promusicsoftware, the first program for the management of the musical repertoire with specific functions of Karaoke. The desire of its creator Leonardo Di Pinto was to enclose in a single solution the ability to use different files and above all to manage them in a simple and immediate. The WINLIVE GOLD version, available for both IOS and ANDROID, is designed for professional use, and has become with the latest update one of the most popular versions even among those who practice the profession of singer-entertainer and require a stable program for the management of their musical repertoire, compatibility and versatility but especially with suitable tools for an increasingly "live" use of their performances. Very appreciated also by all those who are passionate about Karaoke and want to customize their performances. The GOLD version is one of the commercial versions of WINLIVE and therefore it is forbidden to transfer it to third parties, to copy the license illegitimately and to take any action of computer piracy concerning the software. The implementation of Reverse Engineering, the modification of the code and graphic resources as well as the partial reproduction of its files are prohibited and may be prosecuted according to law. We accept no responsibility for improper use of the program and/or corruption of the operating system or loss of data. To learn more visit our website: www.promusicsoftware.com WINLIVE is a trademark of Pro Music Software.

INSTALLATION AND REQUIMENTS

To install WINLIVE GOLD is very simple. Just search inside the Google Play  of your smartphone or tablet and search inside the WINLIVE GOLD search bar. As you can see in the image:

At this point, once you get the icon click on the WINLIVE GOLD item, and go to buy the subscription for a limited time, or buy it forever.

After making the purchase, by clicking on the cloud, you can download the version on your device:

FUNCIONALITY

WINLIVE GOLD is not only a Karaoke program but also a powerful multimedia player and file manager. Through the program it is possible to manage in real time the reproduction of the aforementioned files by displaying in a simple and clear way the synchronized text and chords possibly contained in the files.

WINLIVE GOLD manages up to a maximum of 40 playlists, called SONGLIST of which, 1 temporary (F10) . You can control various parameters of a music file, start and stop, vary the tempo, the pitch (midi, kar, mp3, mp3+lrc, wav, cdg, cdg.zip, mp4, txt, images, ytb youtube, pdf), and for some files vary the instruments, volumes, pan, etc... all in real time! Great improvement in listening to Midifiles thanks to our software Synthesizer (Winlive Synth Orchestra) and the integration of the ICE sound bank inserted within the program allowing a very real sound and impact.

MAIN FEATURES

- Offline karaoke - Playback of multimedia files (midi, kar, mp3, mp3+lrc, wav, cdg, cdg.zip, mp4, txt, images, ytb youtube, pdf)
- Transposition for midi, audio and video files
- Database for song management and song settings
- Management of max 16 markers for each track
- You can connect a .txt, pdf or image to your midi and mp3/audio files
- New sounds to improve the quality of the midifile (internal synth engine)
- Event management to associate specific events to midi, audio and video files
- Possibility to associate a pdf and to program an automatic page change.
- Audio mixing even with video files - Mixing also between midi and midi
- Melody preview bar.
- Fast access to large directories - Supports M-live karaoke format (songservice).
- Chord display for midi, kar and mp3 (if included).
- Multitrack mixer for water filters (volume control and instrument changer) with rescue system
- Management of 40 SongList with the possibility to book a next track or more tracks on a temporary songlist (F10).
- Possibility to save and open up to 16 different F10 lists - Reads pdf, images and txt files as an electronic book.
- Quick search in a SongList.
- File Browser to find a file on your device or set a folder for SongList.
- Songlist editor to set specific options for each song list (loop, melody off for midifile, stop, random tracks) - Loop files like a groove machine.
- Several options to customize your app.
- 164 Mb GM+ Midi Sound Bank (WSE) including Ice Sounds Bank (the most powerful mobile sound generator).
- Support Midi Core, you can also connect your external midi device midi out (instead of internal WSE sounds).
- Intuitive, functional and efficient.

This app contains only demo tracks but is compatible with a large number of easily available files Midi player (midifile player),kar player, mp3 player, cdg player (cd-g player), wave player (wav player), pdf reade, videoplayer, youtube player .

Promusicsoftware develops multiplayer and karaoke software with over 28 years of experience. The program can be purchased by subscription (1 week, 3 months, 1 year) or with perpetual license without expiration! IMPORT OF TRACKS

Opening the application. This screen appears:

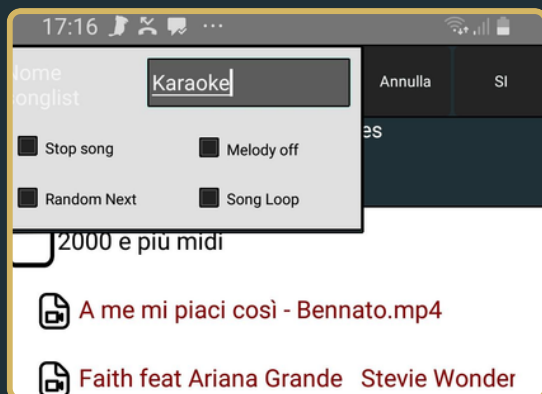

As you can see from the photo I select the SONGS folder, located inside the iPad

By clicking on open, he shows us the various songs selected, inside Winlive Gold, where we can choose in which song list to import them and how to rename the songlist. After clicking import in database, we can choose which songlist to import it as you see in the image:

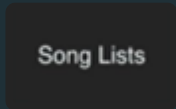

Give a name to the song list, and then click yes to make it load the songs:

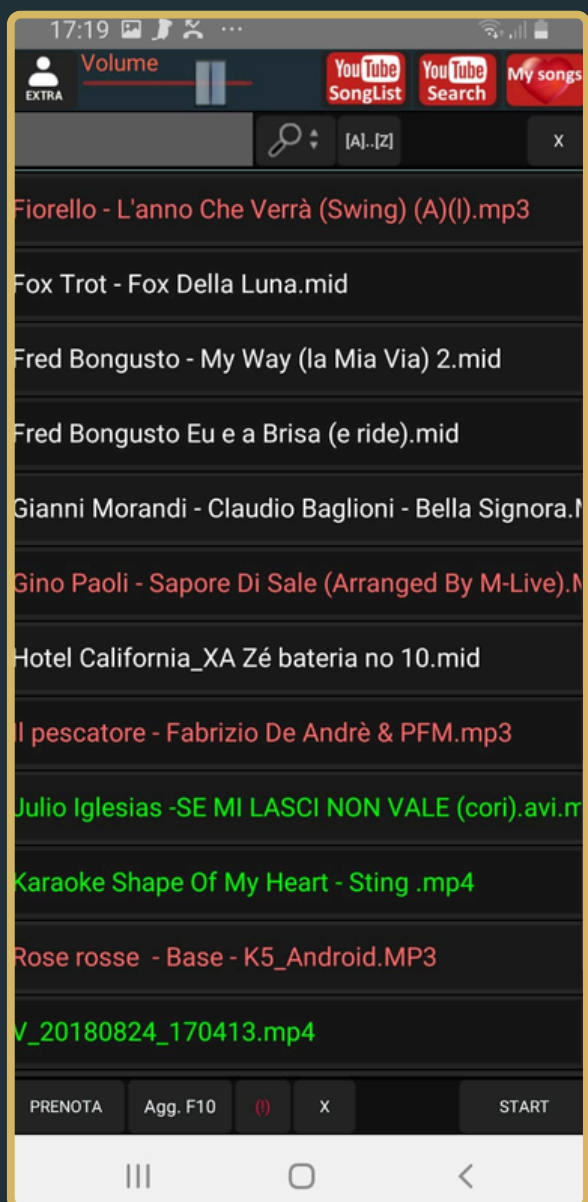

And then a confirmation notice comes out:

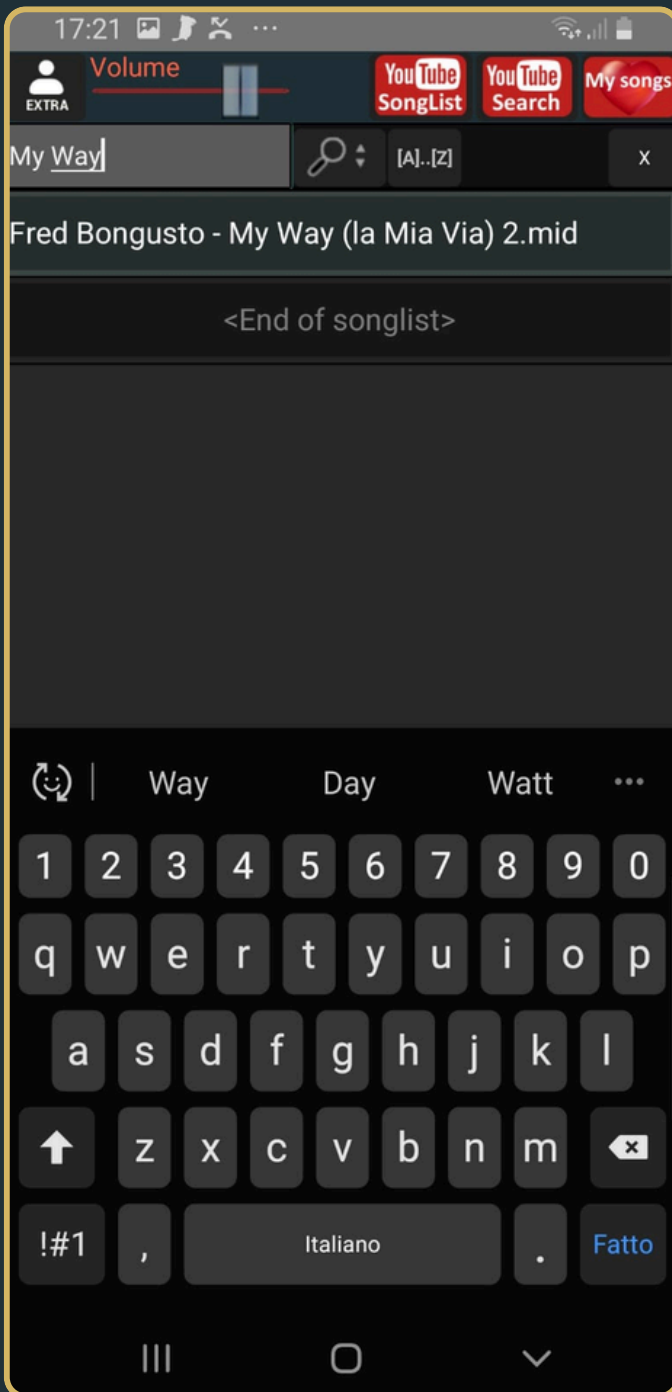

Now if we go into performance mode via the CLOSE button , and click on the songlist entry, and open the song we uploaded we will see the selection of our songs

On this screen, we can double-click to play a song, or click book to book it as a track after the song is playing:

We can also search for a song in the songlist by clicking on the gray bar:

PERMORMANCE MODE

In this mode we can perform a series of operations, such as increasing or decreasing the tempo of a song through the following buttons: **T- T+**

or we can decrease or increase the hue via the following buttons:

We can turn off the melody (track 4) via the melody on :

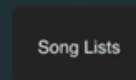

and then save our virtual changes via the Save song button

If we want to reopen the previously opened song list click on the button

or if we want to open another song list click on .

MIX OF A SONG AND MIXER EDIT

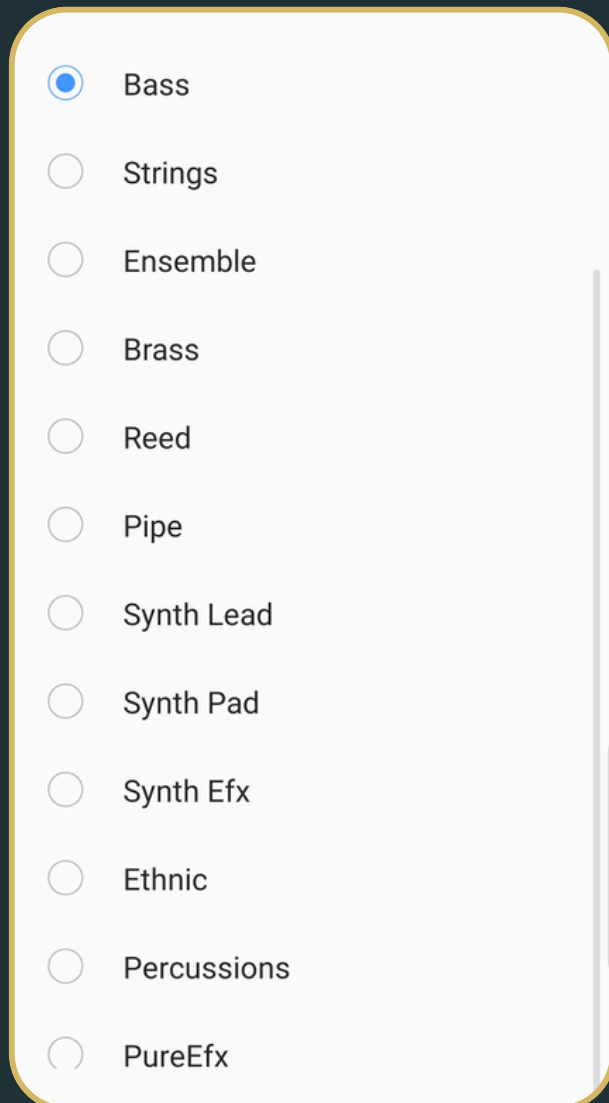

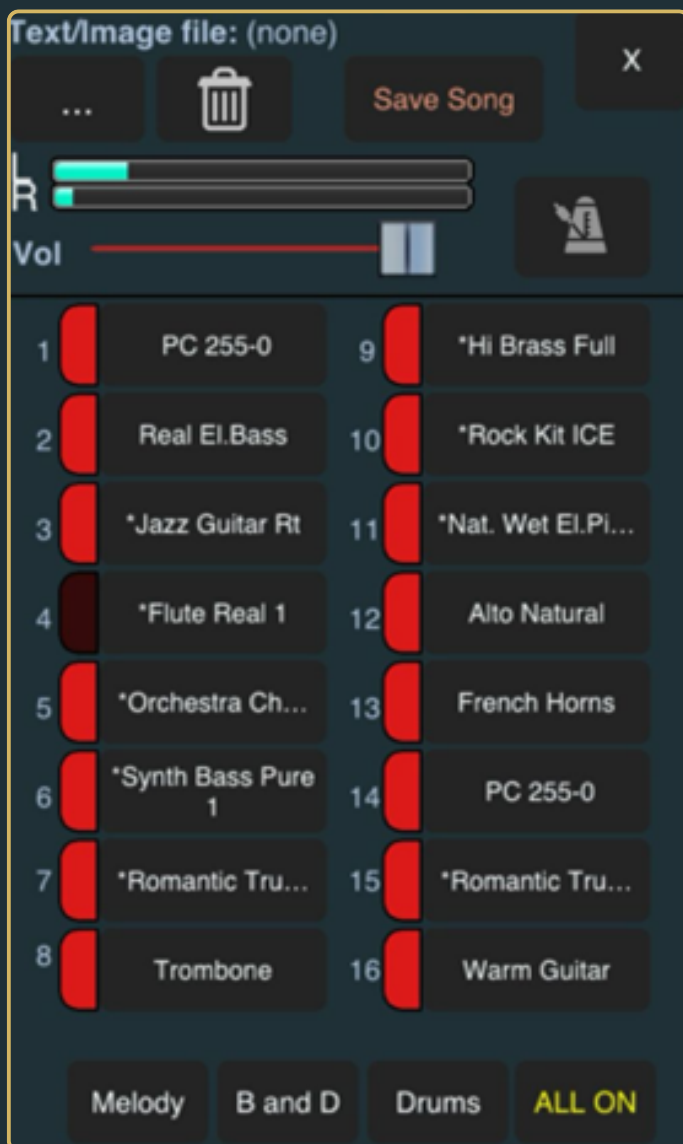

Once we start a song, we can Mix it through the key **START / NEXT**

and we can choose the type of mixing through the button **NextMode : MIX1 (STD)**.

If we want to change instruments of a midi file or modify the

volumes we must click on Mixer edit **MIXER EDIT**.

In this screen, we can click on the tool to edit
You can enable/disable a metronome by clicking on the corresponding button.

And then we decide whether to change the instrument and the kind of instrument:

Confirm with the DONE button and then click on

SAVE SONG  to save the changes.

YOUTUBE SONGLIST, YOUTUBE SEARCH AND MY SONGS

Please note: accept the terms of YOUTUBE before using this service.

Please note that the YOUTUBE service is granted until the release of the next version of WINLIVE. In practice it will only be renewed if you upgrade to the next version.

As you can see in the image this function allows you to search and display on screen the bases present directly on YouTube through the search of the title and the artist. Obviously this function requires an internet connection. A search filter for the karaoke bases is already set up.

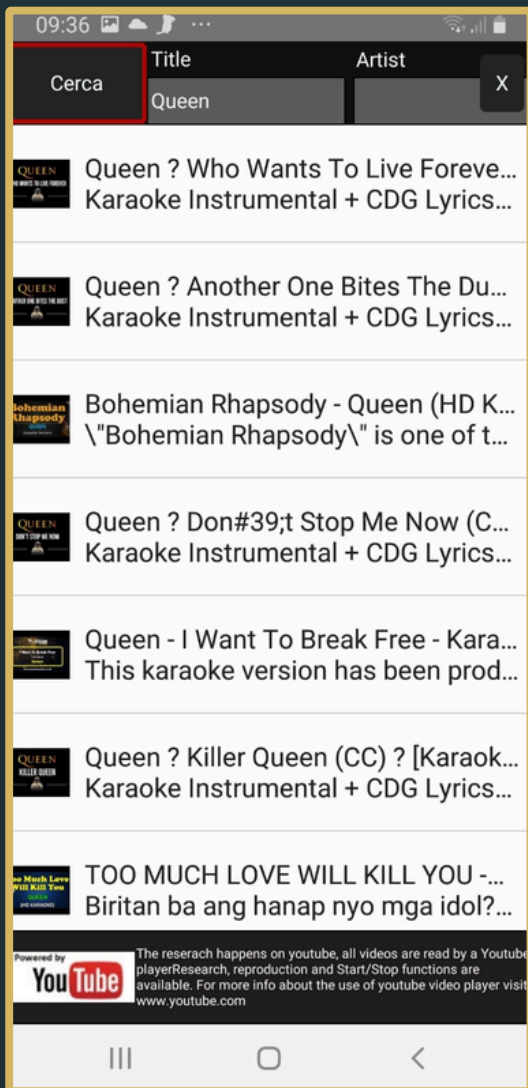

Attention: It is not possible to modify the youtube base or to download the base itself. Therefore, transpose is also excluded but it is only possible to import the link into the database and recall it as if it were any song of our database.

With the BOOK button we can book a song and start it after the current one. database and insert title, artist, author, key.

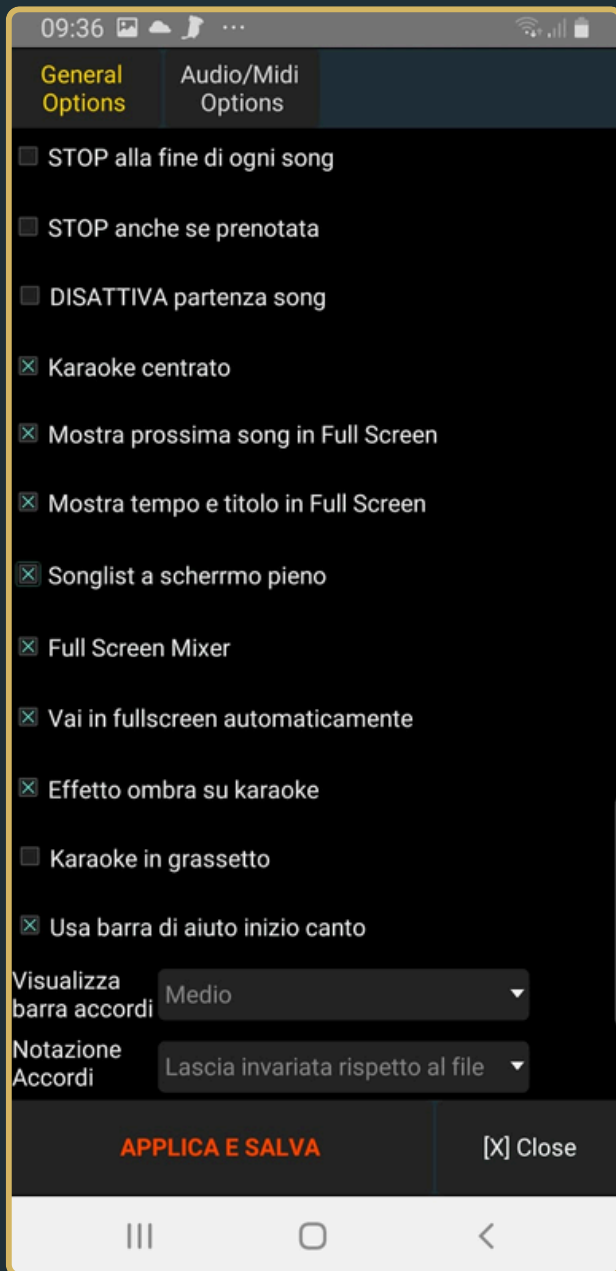

YouTube search allows us to search for free through an internet connection any song on youtube.

The key my songs, we need to open a songlist created with the songs of youtube, in fact if we send a song of youtube, and at the top click on add to my songs, we will find them the song.

TOOLS AND OPTIONS

In this section we can choose various options to customize even more the use of the application

We can decide to put a stop at the end of each song, a stop even if a song is booked, or disable the automatic start.

Karaoke centered serves to center the text of a base, show next song in full screen serves to put full screen the main screen hiding all other commands.

Show time and title in full screen we need to see the title even if the base is set to internal screen.

Full screen songlist serves to increase the size of the songlist and instead of seeing it on the left we will see it in full screen.

Full screen mixer, we need to increase the size of the songlist and instead of seeing it on the right we will see it on the internal screen

Go to fullscreen automatically, it serves to apply the internal screen as soon as you send a song.

Shadow effect on karaoke serves us to shade the text of our bases.

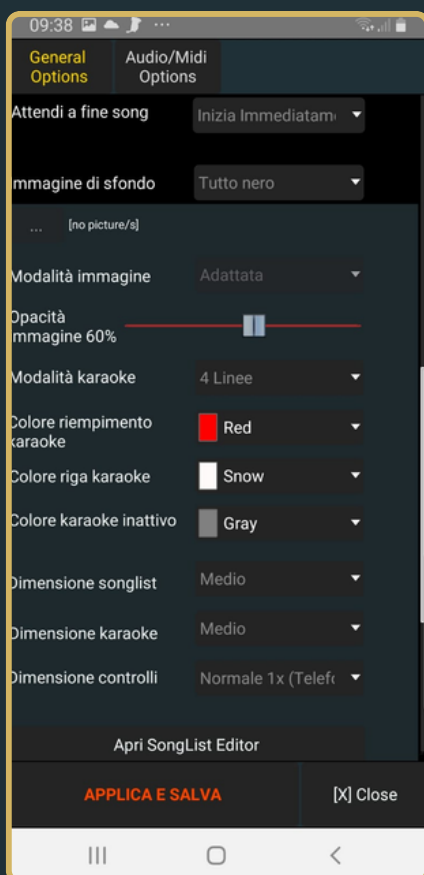

Bold karaoke is used to set the bold text of the bases.

Use help bar to start singing serves, to set a bar above the base to simplify singing.

View chord bar, to decide the chord size.

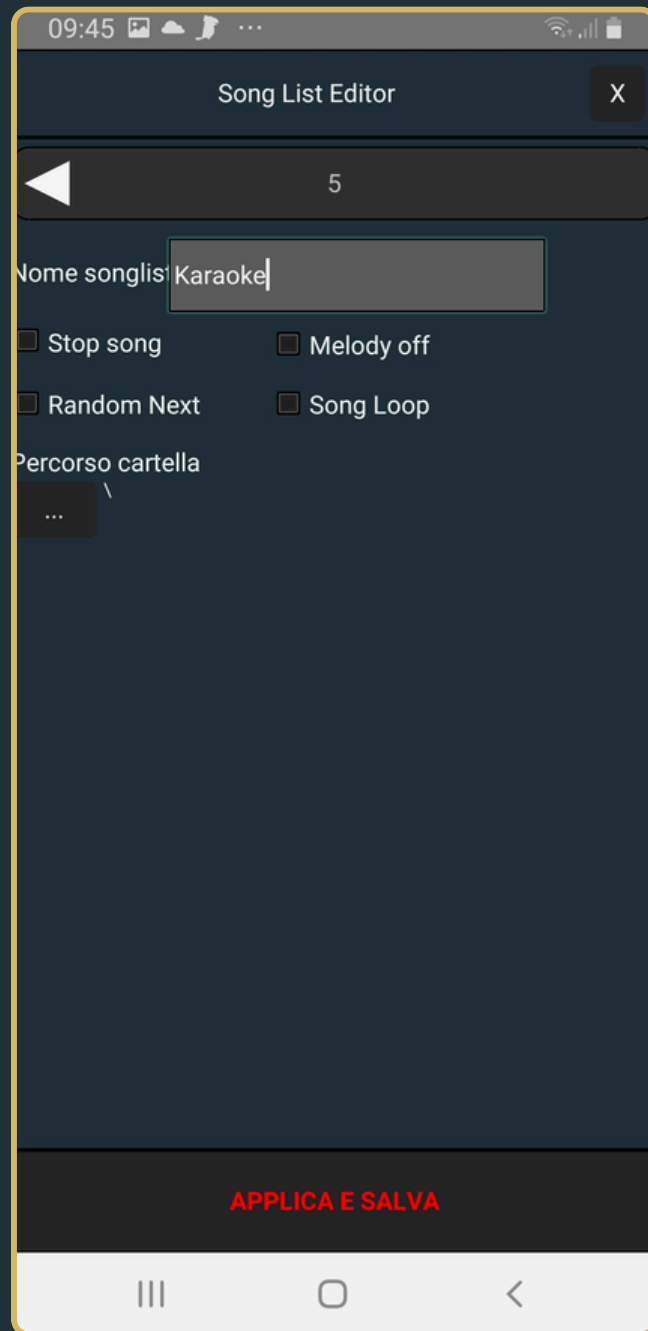

Notation chords we can decide the notation in Italian, English or unchanged from the file.

Wait at the end of the song to decide whether to set a pause of a few seconds before the other base starts or start automatically.

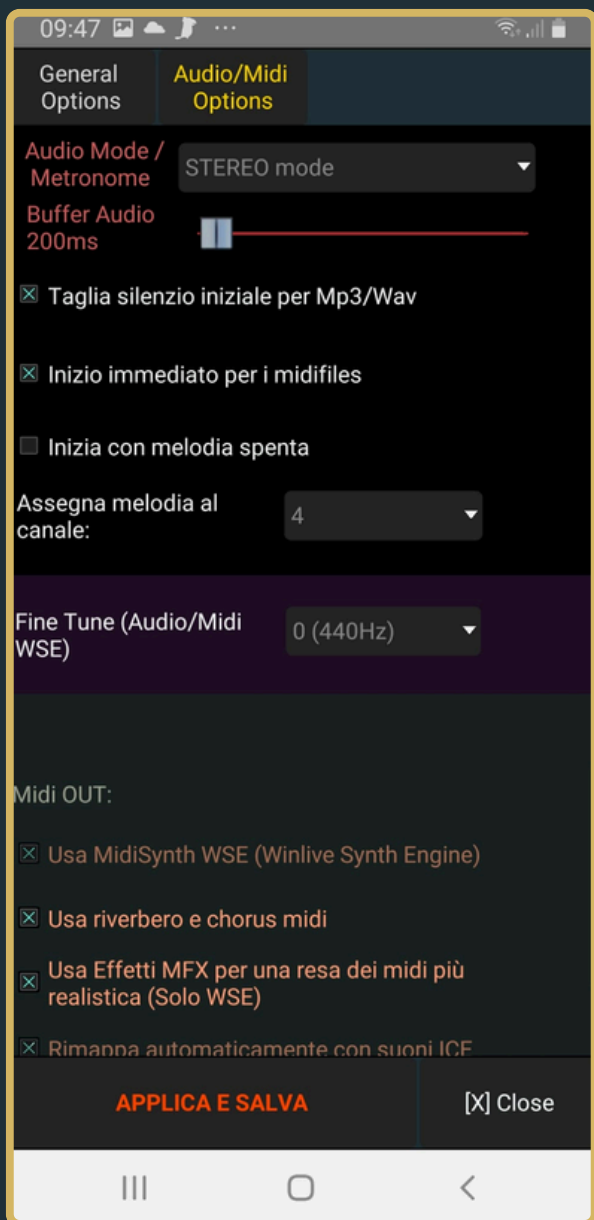

- We need background images to upload images from a folder to post it as a background.
- Image mode helps us to center the background or position.
- Image opacity makes the image opaque to text.
- Karaoke mode we can decide how to display the text.
- Karaoke size we decide text size
- Size controls size of main controls

Song list editor

It allows us to change the name of our songs and decide various options.

Metronome audio mode, we need to set the audio in mono or stereo

Audio buffer, audio fill portion.

Cut silence initial mp3 wav, to anticipate the start of the song where there is a blank space.

Start with melody off, turn off track 4 for midi.

Assign melody to the channel. We can change channel for melody.

Metronome audio mode, we need to set the audio in mono or stereo

Audio buffer, audio fill portion.

Cut silence initial mp3 wav, to anticipate the start of the song where there is a blank space.

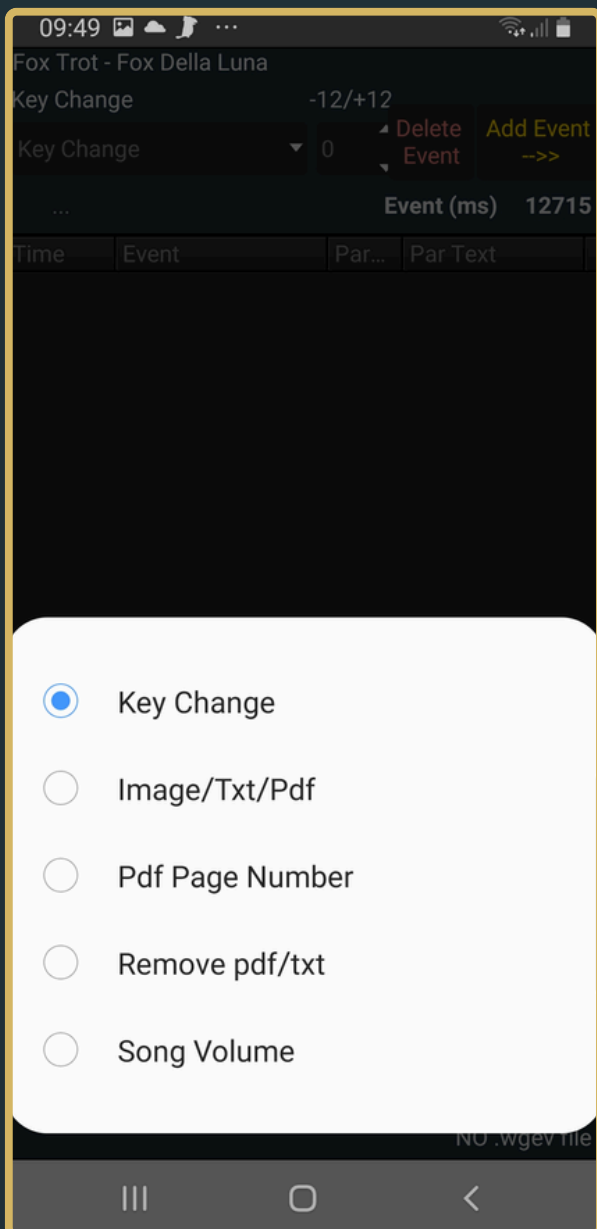

Start with melody off, turn off track 4 for midi.

Assign melody to the channel. We can change channel for melody.

EVENT MANAGEMENT

EV

This function allows you to insert events, sounds or functions in association with a midi, audio or video file. For example, you can insert, in a precise point of the song, a change of tone, an image or pdf, a sample, a change of page of a pdf and so on so you can customize even more your musical performance.

Select in the drop-down menu at the bottom left the type of event to be inserted: The events currently available are:

3 KEY CHANGE: Key change

IMG/TXT/PDF: inserting an image, text and a pdf file. If the associated pdf has been selected the ZOOM the pdf will be divided into 2 parts: part A representing the top of the pdf and part B the bottom

REMOVE PDF/TXT/IMAGE: to remove the pdf file, the text or the associated image

SONG VOLUME: volume of the song.

The TIME column shows the time for entering the event in milliseconds. The EVENT column shows the type of event and the event parameters in the following columns. After entering the events press SAVE and a *.wevn file associated with the song file will be created. When we play a song where events have been inserted the EVENTS button will appear.

HOW TO TRANSFER FILES TO TABLET

Use a compatible USB cable to connect your Android tablet to your PC.
Authorize the connection:

On your tablet, you may see a notification asking you to authorize the USB connection. Tap "Allow" or "Authorize".

Select the type of connection:

On your tablet, choose "File Transfer" (or "MTP" - Media Transfer Protocol) from the list of USB options. This will allow your PC to access files on your tablet.

Access your tablet from your PC:

On your PC, open "File Explorer" (Windows) or "Finder" (Mac). You should see the Android tablet listed as an external device. Double click to open it.

Navigate to the appropriate folders:

On your tablet, navigate to the folder where you want to transfer the "Songs" folder. You can choose a location like "Music" or create a new folder.

Copy the folder "Songs":

Sul PC, trova la cartella "Songs" che vuoi trasferire. Clicca con il tasto destro sulla cartella e seleziona "Copia".

Incolla la cartella sul tablet:

Torna alla finestra del tablet in "Esplora file" (o "Finder"), clicca con il tasto destro nella cartella di destinazione e seleziona "Incolla". Questo copierà la cartella "Songs" sul tablet.

QUICK BUTTONS

Click 2 times on the screen to see full screen.

Hold 3 seconds on the songlist button to open songlist editor.

Hold for 3 seconds on the song list ex F1 to import songs.

Double-click on a song in the song list to start it.
